Interpretation: RN: 107593

Combined Paternity Index: **5,818** Probability of Paternity: 99.98%

The alleged father is not excluded as the biological father of the tested child. Based on testing results obtained from analyses of the DNA loci listed, the probability of paternity is 99.98%. This probability of paternity is calculated by comparing to an untested, unrelated, random individual of the Caucasian population (assumes prior probability equals 0.50). Note: One possible mutation was observed. The mutation frequency was included in the calculation of the probability of paternity.
